

ENERGY SAVING

1 Listen and complete.

light • solar • windows • panels • North • South • electricity

How to save energy when building a house.

1 Build a house with solar : the sun heats the panels and the solar energy is transformed into

2 Build a house with the main rooms facing They get a lot of and they absorb the heat of the sun rays.

3 Make big windows where the rooms face the sun and small where they face and don't get much sun. This way the house absorbs energy and has limited energy loss.

2 Listen and match.

What can YOU do to save energy?

1 Keep windows closed when the heating is on, in winter. If you are hot, turn it down!

2 Turn off the lights when you leave a room.

3 In your free time limit the use of electronic devices: read books, paint, use your imagination to play games alone or with friends. Go out even if it's a rainy day!
